Thanks Dave. Glad Mike gave Doug the analyte suite. I also sent him the prior sampling showing which compounds had hits so he can be sure to include those.

It will. Not sure what all media will be sampled but I know liquids in the ditch and impounded, and air. NDEE is meeting Doug so he'll get the lay of the land and history quickly. My guess is that the sampling will be thorough.

I spoke with Ken earlier. START has been tasked to sample. Doug has an analyte suite that he got from Berringer. Doug will assess and get the sampling done. No response planned at this time.

Morning, friends. I just got off the phone with Doug again – he was trying to call Candace and mixed up our numbers – and emphasized the difference between the wet cake stockpile and the material currently being released. He agreed they are only looking at assessment of the situation right now.

I tried to help Doug on this but I think there may be some conflating the stockpiled wet cake and the current release of liquified manure and stillage. Different issues

I just got off the phone with EPA's OSC, Doug Ferguson, who is prepared to mobilize tomorrow morning.

I texted Jim and asked that he send a written request for assistance to Scott. He did not reply yet.

Ed and Josh,

I just spoke with Ken and Dave.

I understand Dave has been in contact with Jim Macy who has requested our assistance on the scene. I am not clear on why the facility is not able to respond adequately. We will send an OSC tomorrow morning.

I don't have much detail. It is reported that the pesticide laced grain waste from the ethanol process was being land applied at some rate. Now the storage vessel has a leak that may be uncontrolled.

We do not know if it is reaching a waterway.
